👤 PROFILE

Software Engineer with experience across frontend and backend development, building scalable applications and intelligent systems. Proficient in React, Python, and API design, with recent work focused on AI-powered document analysis, semantic processing, and multi-source data handling.

🏢 WORK EXPERIENCE

Netision Technology LLP, AI/ML Engineer

February 2026 –
June 2026
Greater Noida, India

- Designed and implemented advanced document processing capabilities for a Doc Analyst Agent by integrating semantic and recursive chunking strategies, improving context preservation and analysis accuracy for large documents.
- Developed backend tooling for Model Context Protocol (MCP) integration, including clarification workflows and PDF embedding pipelines, enabling efficient document understanding and dynamic query handling.
- Built a scalable mock user interface to support multi-PDF ingestion and analysis, facilitating simultaneous processing and comparison of multiple documents within the system.
- Enhanced system performance and usability by optimizing document parsing, embedding, and retrieval mechanisms for real-world analytical use cases.

Finspectra, Software Engineer

May 2025 –
November 2025
Noida, India

- Developed scalable applications on the Salesforce platform using **Apex**, **Lightning Web Components (LWC)**, and **Visualforce**.
- Built and integrated **REST** and **SOAP APIs** to connect Salesforce with external systems and improve data exchange.
- Designed and automated business workflows using **Salesforce Flows**, **Process Builder**, and other declarative tools.
- Improved application performance by optimizing **Apex classes**, **triggers**, and **LWC** code following software engineering best practices.
- Delivered full software development lifecycle (SDLC) tasks, including requirements gathering, solution design, coding, testing, deployment, and support.
- Ensured code quality and reliability with **90%+ test coverage**, adherence to coding standards, and thorough debugging.
- Collaborated with product owners, QA engineers, and cross-functional teams to deliver software solutions on time and aligned with business requirements.

Kent Cam, Associate

July 2022 – July 2023
Noida, India

- Developed responsive web applications using ReactJS, ensuring seamless user experiences across various devices and screen sizes.
- Implemented media queries, flexible grids, and fluid layouts to optimize web content for desktops, tablets, and mobile devices.
- Designed and built reusable UI components using ReactJS, following best practices such as component composition, props, and state management.
- Leveraged libraries like Material-UI or styled-components to create consistent and visually appealing user interfaces.
- Integrated RESTful APIs endpoints into frontend applications using tools like Axios.
- Consumed data from backend services, handled responses, and updated UI components dynamically.
- Worked with Git for version control, collaborating with other developers using branching strategies (Gitflow) and pull requests.
- Participated in code reviews to maintain code quality and consistency.
- Wrote unit tests using tools like Jest or React Testing Library to validate component behavior and ensure code reliability.
- Conducted end-to-end testing using tools like Selenium.
- Collaborated with UX designers to implement user-friendly interfaces, following design guidelines and wireframes.

📁 COMPANY PROJECTS

Netision AI

- Contributed to the development of an AI-driven document analysis system designed to extract, process, and interpret information from multiple PDFs efficiently.
- Implemented advanced semantic and recursive chunking strategies to enhance context preservation and improve the accuracy of document understanding and retrieval.
- Built backend capabilities for Model Context Protocol (MCP) integration, including clarification workflows and PDF embedding pipelines to support intelligent query handling.
- Developed a scalable multi-PDF processing workflow, enabling simultaneous ingestion, embedding, and analysis of multiple documents.
- Designed and implemented a mock user interface to demonstrate multi-document interaction, improving usability and validating product workflows.
- Optimized document parsing, embedding, and retrieval mechanisms to support real-time analytical use cases and improve overall system performance.

Kent DMS

- **DMS** - Distributor Management System used to track all the records of the organization.
- Worked on Targets, Dashboard, Settings(Reassign) modules.
- Fully Consumed the API's in the mentioned modules.
- Used Postman to check API response

Kent Doorbell

- Smart Motion Detection and Video Recording Doorbell refers to a doorbell equipped with advanced features beyond a traditional doorbell. It can detect motion (such as someone approaching the door) and record video footage.
- This doorbell is compatible with both Android and iOS devices (smartphones and tablets).
- It likely connects to Wi-Fi, allowing users to receive alerts, view live video, and manage settings through a dedicated app.
- Developed and implemented the user interface (UI) for a module related to changing Wi-Fi settings. This module likely allows users to connect the doorbell to their home Wi-Fi network, configure network settings, and troubleshoot connectivity issues.
- Implemented the Sticky Header Date UI and Functionality in the Alerts Module where the "Sticky Header" refers to a user interface (UI) design where a header (such as a date display) remains fixed at the top of the screen even as the user scrolls down.

PERSONAL PROJECTS

Personal Local Server

- Repurposed an old desktop to create a local server for personal and family data management using Ubuntu OS as base.
- By using Nextcloud, I efficiently managed and organized data content, while Jellyfin powered the streaming system for local movies and shows.
- To streamline the deployment and enhance system stability, I learned Docker and networking and containerized the applications and assigned static IP to the server for smoother access.
- This setup provided a user-friendly interface for accessing both data and media content on the local network.

Kanban Board

- Developed a task management Kanban board to track the status of tasks.
- Implemented drag-and-drop functionality to change task status between "To-Do," "In Progress," and "Done."
- Created a task creation page with options to either add a task or create a task and redirect to the homepage.
- Integrated chip tags feature for easier task categorization and searching.
- Added a "Read More" feature to display full task descriptions.
- Enabled task editing for users to modify previously created tasks.

Mini Projects

- **Background Changer** - Developed a tool to randomly change the background color upon user click. Implemented using HTML, CSS, and JavaScript for front-end interaction.
- **Digital Clock** - Built a real-time digital clock displaying the current time in a 24-hour format, with automatic updates. Created using HTML, CSS, and JavaScript.
- **Tempature Converter** - Designed a temperature conversion tool supporting Fahrenheit, Celsius, and Kelvin scales. Users can convert between all three units. Developed using HTML, CSS, and JavaScript.
- **Bookmark Manager** - Implemented a bookmark manager allowing users to save and organize URLs in a list format. Users can click to open saved websites and delete bookmarks. Created with HTML, CSS, and JavaScript.
- **Rock, Papers & Scissors** - Developed an interactive Rock, Paper, Scissors game with real-time score tracking for both the user and the computer. Implemented the game logic using HTML, CSS, and JavaScript to ensure smooth gameplay and dynamic score updates.

SKILLS

Programming Languages

JavaScript, Kotlin, Python

Web Technologies

HTML, CSS & JS

Libraries and Frameworks

ReactJs, Django

Tools and Platforms

Android Studio, Git(Fork for git), Postman, VS Code

CERTIFICATES

Getting Started with Python

University of Michigan, Coursera

Python Data Structures

University of Michigan, Coursera

Python-Django

By Ducat

Android Application Development using Kotlin/JAVA

Jagan Institute of Management Studies (JIMS, Rohini Sector-5)

EDUCATION

Masters of Computer Applications, Jagan Institute of Management Studies

2019 – 2022
Rohini, New Delhi, India

Bachelor of Computer Applications, Maharaja Surajmal Institute

2016 – 2019
Janakpuri, New Delhi,
India
